

Preparing Dish Washing Sink

As a guide use: One tablespoon (1 capful) chlorine bleach per 1 gallon water
Water temperature should be lukewarm (75-100°F).
Higher temperatures can destroy the bleach.

* Centers lacking 3-compartment sinks may supplement sink with plastic pan(s)

Clean sink.
Make sure that it is free of all food particles and soil.

Fill the first compartment 2/3 full with hot, detergent solution made with Dawn, Joy, etc. Water should be hot (110-120° F).
Do NOT add bleach to this water as it will interfere with the detergent.

Fill the second compartment 2/3 full with clear, hot water (at least 110° F).

Fill the third compartment 2/3 full with chlorine sanitizing solution measuring 50-100 ppm.
